10. Revenue Model & Go-to-Market
11. Risk Assessment & Mitigation
12. Key Milestones & Timeline

1. Executive Summary

WhichAI.cloud is a unified AI platform that aggregates the world's best AI models into a single interface. Users can compare models side-by-side, access a curated marketplace of AI tools, rent GPU compute, hire AI talent through a task board, purchase premium prompts, and learn through structured courses.

This document consolidates the complete roadmap for the next 3 weeks: **Weeks 1-2** focus on payment integration, escrow accounts, GPU rental infrastructure, and platform hardening. **Week 3** is the public launch, supported by an aggressive social media marketing campaign targeting LinkedIn and Instagram influencers.

Key Objectives:

- Integrate Stripe Connect for marketplace escrow payments across all revenue streams
- Deploy GPU Host Agent with Docker-based one-command onboarding for compute providers
- Form Texas LLC for legal escrow compliance and payment facilitator status
- Launch with zero-fee hardware listings to bootstrap marketplace supply
- Execute influencer outreach campaign targeting 50+ AI/tech creators on LinkedIn and Instagram

2. Platform Overview & Current State

2.1 Core Platform Modules

AI Comparison Hub: Side-by-side model comparison (Claude 4.6, GPT-5, Gemini, Llama, etc.) with real-time benchmarks.

Know Your AI: Deep-dive profiles for each AI model covering capabilities, pricing, use cases, and limitations.

Marketplace: Buy/sell AI tools, plugins, models, and integrations with escrow-protected transactions.

AI Forge & Task Board: Post AI tasks, hire talent, and manage projects with milestone-based payments.

Prompt Hub: Premium curated prompts for purchase. Community sharing and rating system.

Learning Hub: Structured courses on AI tools, prompt engineering, and model fine-tuning.

GPU Rentals: Rent compute from a distributed network of GPU hosts. Pay-per-hour with automatic billing.

Community: Forums, discussions, and collaborative spaces for AI practitioners.

2.2 Tech Stack

- **Frontend:** Next.js 16.1.6, React 19, Tailwind CSS v4, Framer Motion
- **Backend:** Supabase (PostgreSQL + Auth + Edge Functions + Realtime)
- **Hosting:** Vercel (frontend) + Supabase (backend + DB)
- **Payments:** Stripe Connect (planned)
- **GPU Agent:** Docker-based host agent with WebSocket heartbeat

2.3 Current Deployment

The site is live at **www.whichai.cloud** deployed on Vercel with Supabase backend. Dark mode is functional with class-based Tailwind v4 toggle. Auth is wired via Supabase. The hub page features interactive tiles for each module. Key pages are built but payment, escrow, and GPU infrastructure are not yet integrated.

3. Week 1-2: Pre-Launch Development Plan

Week 1 (April 8 - April 14)

Day 1-2: Payment Infrastructure

- Register Stripe Connect account (Platform/Express mode)
- Implement Stripe Connect onboarding flow for sellers/providers
- Create payment intent API routes in Supabase Edge Functions
- Build checkout UI components (cart, payment form, confirmation)
- Set up webhook handlers for payment events (payment_intent.succeeded, transfer.created)

Day 3-4: Escrow System

- Design escrow state machine: CREATED -> FUNDED -> DELIVERED -> RELEASED (or DISPUTED -> RESOLVED)
- Create Supabase tables: escrow_transactions, escrow_disputes, escrow_releases
- Implement charge -> hold -> release flow via Stripe Connect transfers
- Build 72-hour dispute window with automatic release timer
- Create admin dashboard for dispute resolution
- Wire up email notifications for each escrow state change

Day 5-7: Marketplace Integration

- Connect marketplace listings to Stripe product catalog
- Implement seller onboarding (KYC via Stripe Connect Express)
- Build purchase flow: browse -> add to cart -> checkout -> escrow -> delivery -> release
- Add seller dashboard (earnings, pending payouts, transaction history)
- Implement review/rating system tied to completed transactions
- Set up 5-10% platform fee on marketplace transactions

Week 2 (April 15 - April 21)

Day 8-9: AI Forge & Task Board Payments

- Implement milestone-based payment system for task board
- Create task posting flow with budget allocation and milestone definition
- Build bid/proposal system with escrow deposit on acceptance
- Wire up milestone completion -> escrow release flow
- Add 8-12% platform fee on task board transactions

Day 10-11: GPU Rental Billing

- Deploy GPU Host Agent Docker image to registry
- Implement per-hour billing with Stripe usage-based subscriptions
- Create GPU host onboarding: one-command Docker setup -> agent registration -> availability
- Build rental dashboard: active sessions, cost tracking, auto-stop on budget limit
- Implement WebSocket heartbeat monitoring (host alive check every 30s)
- Set up reverse tunnel security for GPU access (no open ports on host)

Day 12-13: Prompt Hub & Learning Hub Monetization

- Implement prompt purchase flow (20% platform fee)
- Build course enrollment and payment system (30% platform fee)
- Create creator payout dashboard for prompt sellers and course authors
- Add free tier: 3 free prompts/day, 1 free course module

Day 14: Testing & QA

- End-to-end payment flow testing across all modules
- Escrow dispute resolution testing
- GPU rental session lifecycle testing
- Mobile responsive testing for all checkout flows
- Security audit: Stripe webhook signature verification, CSRF protection
- Load testing: simulate 100 concurrent transactions

4. Payment & Escrow Integration

4.1 Stripe Connect Architecture

WhichAI operates as a **Payment Facilitator** using Stripe Connect in Express mode. This allows the platform to hold funds in escrow, deduct platform fees, and transfer payouts to sellers/providers without requiring a full money transmitter license.

4.2 Escrow Flow (All Transaction Types)

Step	Action	Stripe API	Status
1	Buyer initiates purchase	PaymentIntent.create()	CREATED
2	Payment captured, funds held	PaymentIntent.capture()	FUNDED
3	Seller delivers / milestone met	Manual or auto trigger	DELIVERED
4a	No dispute within 72 hours	Transfer.create()	RELEASED
4b	Buyer opens dispute	Dispute webhook	DISPUTED
5	Admin resolves dispute	Refund or Transfer	RESOLVED

4.3 Platform Fee Structure

Module	Fee %	Escrow Required	Payout Timing
Marketplace	5-10%	Yes	72h after delivery
Task Board	8-12%	Yes (milestone)	On milestone approval
Prompt Hub	20%	No (instant)	Weekly batch
Learning Hub	30%	No (instant)	Monthly batch
GPU Rentals	15%	Yes (hourly)	Daily settlement

4.4 Webhook Events to Handle

- **payment_intent.succeeded** - Update escrow status to FUNDED, notify seller
- **payment_intent.payment_failed** - Notify buyer, log failure reason
- **transfer.created** - Update escrow to RELEASED, notify seller of payout
- **charge.dispute.created** - Freeze escrow, notify admin, start resolution

- **account.updated** - Track seller KYC/onboarding status
- **payout.paid** - Confirm seller received funds

4.5 Database Schema (Supabase)

escrow_transactions: id, buyer_id, seller_id, amount, platform_fee, stripe_payment_intent_id, stripe_transfer_id, status (enum), module (marketplace/taskboard/gpu), created_at, funded_at, delivered_at, released_at, disputed_at, resolved_at

escrow_disputes: id, escrow_id, opened_by, reason, evidence_urls[], admin_notes, resolution (refund/release/split), resolved_at

5. GPU Rental Infrastructure & Host Agent

5.1 Architecture Overview

The GPU rental system uses a distributed architecture where compute providers (hosts) run a lightweight Docker-based agent that connects to the WhichAI platform. Renters get secure access to GPU resources without hosts needing to open any ports or manage networking.

5.2 GPU Host Agent

The Host Agent is a Docker container that providers run with a single command:

```
docker run -d --gpus all whichai/gpu-agent:latest --token=HOST_TOKEN
```

Agent Responsibilities:

- **Registration:** On first boot, registers with platform API, reports GPU specs (model, VRAM, CUDA version)
- **Heartbeat:** WebSocket connection to platform, sends alive signal every 30 seconds
- **Resource Monitoring:** Reports GPU utilization, memory usage, temperature every 60 seconds
- **Session Management:** Spawns isolated Docker containers for each rental session
- **Reverse Tunnel:** Creates secure tunnel (Cloudflare/ngrok) for renter access - no open ports on host
- **Auto-Stop:** Terminates sessions when renter's budget is exhausted or session time expires
- **Billing Hooks:** Reports usage metrics to platform for per-hour billing calculation

5.3 Security Model

- Each rental session runs in an isolated Docker container with resource limits
- Reverse tunnels ensure hosts never expose ports to the public internet
- All communication encrypted via TLS 1.3
- Session tokens are single-use and time-limited
- Host reputation system based on uptime, speed, and renter reviews

5.4 Host Onboarding Flow

1. **Sign Up:** Host creates account on WhichAI, completes Stripe Connect KYC
2. **Install Agent:** One-command Docker install with unique host token
3. **Auto-Detection:** Agent detects GPU hardware, reports specs to platform
4. **Set Pricing:** Host sets hourly rate (or accepts platform suggested rate)
5. **Go Live:** Host appears in GPU marketplace, starts receiving rental requests

6. Legal & Compliance (LLC Formation)

6.1 Why Texas LLC

To operate escrow accounts and process payments as a platform, WhichAI needs a legal entity. Texas is chosen for: no state income tax, business-friendly regulations, fast online filing, and strong LLC protections. The entity is required for Stripe Connect platform registration and to comply with money transmission regulations.

6.2 Formation Steps

Step 1: File Certificate of Formation

Online via Texas Secretary of State (\$300 filing fee). Name: WhichAI LLC or WhichAI Cloud LLC.

Step 2: Obtain EIN

IRS Form SS-4, online application. Required for Stripe, banking, and tax filing.

Step 3: Operating Agreement

Single-member LLC operating agreement defining: member roles, profit distribution, escrow handling authority.

Step 4: Registered Agent

Appoint Texas registered agent (can use commercial service ~\$50/year).

Step 5: Open Business Bank Account

Required for Stripe Connect platform deposits. Recommended: Mercury or Relay for startups.

Step 6: Stripe Connect Platform Application

Apply with EIN, bank account, and business description. Takes 2-5 business days.

6.3 Compliance Requirements

- Annual Texas franchise tax report (due May 15 each year)
- Stripe Connect compliance: Platform Terms of Service, seller KYC via Express onboarding
- Privacy Policy and Terms of Service on website (required for payment processing)
- DMCA policy for marketplace (user-generated content protection)
- Escrow disclosures: clearly state hold periods, dispute process, and fee structure

7. Week 3: Launch Plan (April 22 - April 28)

7.1 Pre-Launch Checklist (April 22-23)

- Final QA pass on all payment flows (end-to-end with test cards)
- DNS and SSL verification for whichai.cloud
- Verify Vercel production environment variables (Stripe keys, Supabase URL)
- Load test: 500 concurrent users on Vercel + Supabase
- Seed marketplace with 20+ initial listings (AI tools, prompts, templates)
- Seed GPU marketplace with 5+ host providers (internal/partner machines)
- Prepare launch content: blog post, social media assets, email newsletter
- Set up analytics: Vercel Analytics, Supabase usage tracking, Stripe dashboard

7.2 Launch Day (April 24)

Time	Action	Owner
6:00 AM	Final production deploy + smoke test	Engineering
8:00 AM	Publish blog post: 'WhichAI is Live'	Marketing
8:30 AM	Post on LinkedIn (founder personal + company page)	Founder
9:00 AM	Post on Instagram (carousel + Reels)	Marketing
9:30 AM	Send launch email to waitlist	Marketing
10:00 AM	Post on Reddit (r/artificial, r/MachineLearning)	Community
10:30 AM	Post on Twitter/X with product demo video	Marketing
11:00 AM	DM top 10 influencers with exclusive access	Founder
12:00 PM	Monitor metrics, respond to comments, fix any issues	All
3:00 PM	Second wave social posts (different angle/feature focus)	Marketing
6:00 PM	End of day metrics review, plan Day 2 content	All

7.3 Launch Week Follow-Up (April 25-28)

- **Day 2:** Follow up on influencer DMs, publish 'How to Compare AI Models' tutorial
- **Day 3:** Feature highlight posts (Marketplace, GPU Rentals), engage with all comments
- **Day 4:** User testimonial/feedback roundup, fix any reported bugs
- **Day 5:** Week 1 metrics report, plan Week 2 content calendar

8. Social Media Marketing Strategy

8.1 Platform Strategy

LinkedIn (Primary - B2B & Professional)

LinkedIn is the primary channel for reaching AI professionals, developers, and decision makers. Goal: establish WhichAI as the go-to AI comparison and marketplace platform.

- **Content Mix:** 40% educational (AI comparisons, benchmarks), 30% product updates, 20% thought leadership, 10% community
- **Post Frequency:** 5x/week (1 per weekday)
- **Content Types:** Carousels comparing AI models, short-form video demos, polls (Which AI is best for X?), articles
- **Engagement Strategy:** Comment on AI influencer posts daily, join AI groups, share insights
- **Key Hashtags:** #AI #ArtificialIntelligence #WhichAI #AIComparison #GPUCompute #AIMarketplace

Instagram (Secondary - Visual & Creator)

- **Content Mix:** 50% Reels (short demos, AI comparisons), 30% carousels (educational), 20% Stories (behind the scenes)
- **Post Frequency:** 4x/week posts + daily Stories
- **Reels Strategy:** 15-30 second comparisons ('Claude vs GPT in 30 seconds'), tutorials, AI news reactions
- **Visual Style:** Dark theme with neon purple/cyan accents (matching brand), clean typography
- **Key Hashtags:** #AITools #TechStartup #AIComparison #MachineLearning #GPURental #WhichAI

Twitter/X (Support Channel)

- Real-time AI news commentary and hot takes
- Thread breakdowns of AI model comparisons
- Engage with AI community conversations daily
- Post frequency: 2-3x/day (mix of original and engagement)

8.2 Content Calendar - Pre-Launch (Weeks 1-2)

Week	Mon	Tue	Wed	Thu	Fri
Week 1	AI comparison carousel (LI)	Behind scenes Reel (IG)	Thought piece on AI access (LI)	GPU rental explainer (IG)	Community poll (LI)
Week 2	Marketplace teaser (LI)	AI model Reel (IG)	Escrow trust article (LI)	Feature sneak peek (IG)	Launch countdown (All)

9. Influencer Outreach Playbook

9.1 Target Influencer Tiers

Tier	Followers	Quantity	Approach	Offer
Mega	100K+	5-10	Personal DM from founder	Equity/advisory + lifetime free
Mid	10K-100K	15-20	Personalized DM + email	6-month free pro + affiliate %
Micro	1K-10K	25-30	Template DM + follow first	3-month free pro + feature
Nano	500-1K	50+	Batch outreach	Free pro account + swag

9.2 LinkedIn Outreach Strategy

Target Profiles:

- AI/ML engineers and researchers sharing model comparisons
- Tech founders and CTOs discussing AI adoption
- AI newsletter authors (The Batch, Import AI, etc.)
- Developer advocates at AI companies
- AI educators and course creators

Outreach Template (LinkedIn DM):

"Hi [Name], I've been following your content on [specific topic] and really appreciated your recent post about [specific post]. I'm building WhichAI.cloud - a platform where people can compare AI models side-by-side, access a marketplace of AI tools, and rent GPU compute. We're launching in [X days] and I'd love to offer you early access + a free Pro account. Would you be interested in checking it out?"

9.3 Instagram Outreach Strategy

Target Profiles:

- AI tool reviewers and 'best AI tools' content creators
- Tech lifestyle influencers who cover productivity tools
- AI art creators (potential GPU rental customers)
- Coding tutorial creators (potential course partners)
- Startup/entrepreneurship accounts covering AI trends

Collaboration Ideas:

- **Sponsored Reel:** '5 AI Models Compared in 60 Seconds' using WhichAI

- **Carousel Collab:** Joint post comparing AI models for specific use case
- **Story Takeover:** Influencer explores WhichAI for a day
- **Affiliate Program:** 15% commission on referred paid signups for 6 months

9.4 Outreach Timeline

- **Week 1, Day 1-3:** Research and list 50+ target influencers across tiers
- **Week 1, Day 4-5:** Follow all targets, engage with their content (likes, comments)
- **Week 1, Day 6-7:** Send first batch of DMs to Mega and Mid tier (20 targets)
- **Week 2, Day 1-3:** Follow up on Mega/Mid responses, send Micro tier DMs (30 targets)
- **Week 2, Day 4-5:** Send Nano tier batch outreach (50+ targets)
- **Week 2, Day 6-7:** Confirm launch day collaborations, prepare co-branded content
- **Launch Day:** Coordinate simultaneous posts with confirmed influencer partners

10. Revenue Model & Go-to-Market

10.1 Revenue Streams

Stream	Model	Fee	Launch Priority
Marketplace	Transaction fee	5-10%	High - launch with
Task Board	Milestone fee	8-12%	High - launch with
Prompt Hub	Per-purchase fee	20%	Medium - Week 2
Learning Hub	Course enrollment	30%	Medium - Week 2
GPU Rentals	Hourly billing	15%	High - launch with
Pro Subscriptions	Monthly/Annual	\$29/\$249	Post-launch
API Access	Usage-based	Pay-per-call	Post-launch

10.2 Go-to-Market Strategy

Phase 1: Supply-Side Bootstrap (Weeks 1-2)

- **Zero-fee hardware listings:** Launch GPU marketplace with 0% platform fee for first 90 days to attract hosts
- **Poach prompt engineers:** Recruit top prompt creators from PromptBase, FlowGPT with better revenue split
- **Free education funnel:** Offer free AI courses to build email list and community
- **Student swap:** Partner with university AI clubs for free accounts in exchange for content

Phase 2: Demand Generation (Launch Week)

- **Escrow as moat:** Market escrow-protected transactions as key differentiator vs competitors
- **Comparison content:** SEO-optimized AI comparison pages to capture organic search traffic
- **Launch discount:** 50% off first transaction fees for launch week signups
- **Referral program:** \$10 credit for each referred user who completes a transaction

Phase 3: Growth & Retention (Post-Launch)

- Introduce Pro subscription tier with advanced features (API access, priority GPU, bulk discounts)
- Build community features: forums, leaderboards, reputation system
- Expand to enterprise: team accounts, custom integrations, SLA guarantees
- Geographic expansion: localized content and region-specific GPU availability

11. Risk Assessment & Mitigation

Risk	Impact	Likelihood	Mitigation
Stripe Connect application delayed	High	Medium	Apply immediately. Have PayPal backup. Manual transfers if needed.
LLC formation takes too long	Medium	Low	Texas online filing is 2-3 days. Use expedited service if needed.
Low marketplace supply at launch	High	Medium	Seed with own listings. Zero-fee promo. Partner with AI tool makers.
GPU host reliability issues	Medium	Medium	SLA requirements. Reputation system. Auto-failover to backup hosts.
Payment disputes overwhelm team	Medium	Low	72-hour auto-release. Clear T&S. Escalation tiers for dispute types.
Influencer outreach low response rate	Low	High	Volume approach. 50+ targets. Follow up 2x. Pivot to paid ads.
Vercel/Supabase scaling limits	High	Low	Monitor usage. Upgrade plans. Have migration plan to AWS/GCP.

12. Key Milestones & Timeline

Date	Milestone	Status
Apr 8	Roadmap finalized, development sprint begins	Today
Apr 9	Stripe Connect application submitted	Pending
Apr 9	Texas LLC filing submitted	Pending
Apr 10	Payment infrastructure (Stripe) integrated	Pending
Apr 11	Escrow system live (marketplace)	Pending
Apr 14	Marketplace + Task Board payments complete	Pending
Apr 15	GPU Host Agent v1 deployed	Pending
Apr 16	GPU rental billing integrated	Pending
Apr 17	Prompt Hub + Learning Hub monetization live	Pending
Apr 18	Full QA pass + security audit	Pending
Apr 19-20	Influencer DMs sent (Mega + Mid tier)	Pending
Apr 21	Pre-launch content published	Pending
Apr 22	Launch readiness review	Pending
Apr 24	LAUNCH DAY	Pending
Apr 28	Week 1 metrics review	Pending

Next Steps: Begin Day 1 tasks immediately. File LLC and Stripe Connect applications today. Start Stripe payment integration in parallel. Begin influencer research list.
